

Corporate Policy of the Reinhold Keller GmbH

Corporate Policy

The corporate policy is an essential element of the company's business strategy. The principles and targets of this policy are defined, documented and communicated by the management. All executives and employees are bound to contribute vigorously to realizing the specified measures and targets.

Continuous Improvement

We assure a continuous improvement determining the company's targets within the range of quality, environment and occupational safety. These are revised thoroughly and adjusted regularly.

Quality Standards

The Reinhold Keller GmbH regards itself as supplier of products with highest quality standards. We meet our customer's expectations as it concerns adherence of schedules, product quality and flexibility. Complying with these requirements is our top priority.

Environmental Protection

One of our corporate principles is the responsible use of natural resources. We work with new technologies in order to reduce negative impacts on the environment as far as possible and lower power consumption.

Occupational Safety

The management, supervisors and employees are in charge of occupational safety. All teams work responsibly in equal measure on implementing daily the occupational safety rules. The management has the obligation to design and offer a working environment which does not affect health and wellbeing of the employees.

Legal Directives

Complying with the legal regulations and requirements mainly in terms of environment and occupational safety is natural for us. Beyond that, we are keen to do more than only acting in accordance to the limiting values as for example in production in order to protect our employees.

Our Employees

Our employees are important to us. We strive to integrate our employees in corporate processes as far as possible. Through qualification, information and communication, we encourage our employees to be aware of quality and environment; and among other things, to contribute actively to the protection of the atmosphere.
